

Nature Shape Search

(Recommended for ages 2 to 6)

Preparation:

Print out the next four pages and cut into quarters so there is one shape on each sheet.

Take a walk down the street or go to a local park. Along the way, start your search!

1. Give each child one card at a time (older children might like more than one).
2. Explore the area you have chosen and have them find a nature item that matches the shape on their card.
3. When they find a match, take photos of the objects they found and the card.
4. Give them another card and start searching again.
5. After you've found an item for each shape, return all found items back to where you found them. All nature items provide homes and food to many creatures!

Below are some photos of this activity from the past to give you an idea of what children might find.
